

Create a new vite project:

```
npm create vite@latest
```

..

Install tailwindcss

```
npm install tailwindcss @tailwindcss/vite
```

Vite.config.js

```
import { defineConfig } from 'vite'
import react from '@vitejs/plugin-react'
import tailwindcss from '@tailwindcss/vite'

// https://vite.dev/config/
export default defineConfig({
  plugins: [react(), tailwindcss()],
})
```

@import "tailwindcss";

Copy to Index.css and delete all other contents.

**Open App.jsx file and type following code to test if Tailwind CSS works or not:**

```
import { useState } from 'react'
import './App.css'
function App() {
  const [count, setCount] = useState(0)
  return (
    <>
      <h1 className='text-3xl bg-green-400'>password Generator Application</h1>
    </>
  )
}
export default App
```

if you get following output, then the tailwind css is working fine.

password Generator Application

## Project 1:

The screenshot shows a "Feedback Form" application. At the top, the title "Feedback Form" is centered in a bold, black font. Below the title is a white rectangular form card with a thin gray border. The card has a header section labeled "Contact Information". Inside this section, there are three input fields: "Name:" with a corresponding input box, "Email:" with a corresponding input box, and "Feedback:" with a larger input box for multiple lines. At the bottom of the card is a large blue button with the word "Submit" in white.

### STEP 1: App.jsx

```
function App() {
  const [count, setCount] = useState(0)

  return (
    <>
    </>
  )
}

export default App
```

### STEP 2:

```
<body className="bg-gray-100">
  <header className="text-center py-8">
    <h1 className="text-4xl font-bold">Feedback Form</h1>
  </header>

</body>
```

## Feedback Form

**text-center:** This class typically centers the text horizontally within the element.

**py-8:** In frameworks like Tailwind CSS, this class applies vertical padding (padding on the top and bottom) with a spacing scale value of 8.

**text-4xl:** Sets the text size to 4 times extra large, making the text much larger than the default size.

**font-bold:** Makes the text bold.

**STEP 3:**

The screenshot shows a feedback form titled "Feedback Form". Below it is a section titled "Contact Information" which contains a label "Name:" followed by an empty input field.

```
<form action="#" method="post" className="bg-white shadow-md rounded px-8 pt-6 pb-8 mb-4 max-w-md mx-auto">
  <fieldset>
    <legend className="text-lg font-semibold mb-4 text-left">Contact Information</legend>
    <div className="mb-4">
      <label for="name" className="block text-sm font-medium text-gray-700 text-left">
        Name:
      </label>
      <input
        type="text"
        id="name"
        name="name"
        required
        className="mt-1 p-2 block w-full rounded-md border outline-none border-gray-300 focus:border-indigo-500 focus:ring-1 focus:ring-indigo-500 transform hover:scale-105 focus:scale-100 transition duration-300 ease-in-out"
      />
    </div>
  </fieldset>
</form>
```

**Explanation:**

- i. **bg-white:** Sets the background color of the element to white.
- ii. **shadow-md:** Applies a medium-sized box shadow, giving the element a subtle depth effect.
- iii. **rounded:** Rounds the corners of the element.
- iv. **px-8:** Adds horizontal padding (left and right) with a spacing scale value of 8.
- v. **pt-6:** Adds top padding with a spacing scale value of 6.
- vi. **pb-8:** Adds bottom padding with a spacing scale value of 8.
- vii. **mb-4:** Adds a bottom margin with a spacing scale value of 4.
- viii. **max-w-md:** Restricts the element's maximum width to the medium size (typically around 28rem).
- ix. **mx-auto:** Centers the element horizontally by setting its left and right margins to auto.

**Fieldset element:**

The `fieldset` element in HTML5 is used to group related elements within a form. It's helpful for organizing and visually distinguishing form sections. It's often paired with the `legend` element, which provides a caption or title for the group. Here's a simple example: `<fieldset><legend>Personal Information</legend>...</fieldset>`. This helps improve readability and accessibility.

**text-lg:** Sets the text size to large (typically around 1.125rem or 18px, depending on your configuration).

**font-semibold:** Applies a semibold font weight, making the text appear slightly bolder.

**mb-4:** Adds a bottom margin using Tailwind's spacing scale, usually equivalent to 1rem (16px) by default.

**text-left:** Aligns the text to the left.

#### **block:**

Forces the element to display as a block-level element, meaning it will take up the full width available and start on a new line.

#### **text-sm:**

Sets the font size to small (usually around 0.875rem or 14px by default), making the text slightly smaller than the default.

#### **font-medium:**

Applies a medium font weight, giving the text a bit more emphasis than normal text without being as heavy as `font-bold`.

#### **text-gray-700:**

Sets the text color to a specific shade of gray. In Tailwind's default color palette, `gray-700` is a moderately dark gray.

#### **text-left:**

Aligns the text to the left, ensuring that the content starts from the left edge of the container.

**mt-1:** Adds a small top margin (usually 0.25rem) to create vertical spacing.

**p-2:** Adds padding on all sides (typically 0.5rem) for internal spacing.

**block:** Makes the element a block-level element so it takes up the full available width.

**w-full:** Sets the element's width to 100% of its parent container.

**rounded-md:** Applies a medium border radius, rounding the corners.

**border:** Adds a default border (usually 1px solid).

**outline-none:** Removes the default focus outline, allowing custom focus styles to show.

**border-gray-300:** Sets the initial border color to a light gray.

**focus:border-indigo-500:** When the element is focused (clicked or tabbed into), the border color changes to a vibrant indigo.

**focus:ring-1:** Adds a ring (like an outline) of 1 unit thickness when the element is focused.

**focus:ring-indigo-500:** Sets the focus ring's color to indigo.

**transform:** Enables CSS transform properties so scaling animations can be applied.

**hover:scale-105:** Slightly enlarges the element (to 105% of its size) when hovered over.

**focus:scale-100:** Resets the scaling back to 100% when the element is focused, ensuring focus and hover states don't conflict.

**transition:** Activates CSS transitions for a smoother change of properties.

**duration-300:** Sets the duration of the transitions to 300 milliseconds.

**ease-in-out:** Uses an ease-in-out timing function for the transitions, which starts slow, speeds up, then slows down again.

**STEP 4:**

The screenshot shows a feedback form titled "Feedback Form". It contains three input fields: "Name", "Email", and "Feedback", each with a corresponding label and a text input box. Below these fields is a blue "Submit" button.

Add the following code:

```
<div className="mb-4">
  <label for="email" className="block text-sm font-medium text-gray-700 text-left">
    Email:
  </label>
  <input
    type="email"
    id="email"
    name="email"
    required
    className="mt-1 p-2 block w-full rounded-md border outline-none border-gray-300
    focus:border-indigo-500 focus:ring-1 focus:ring-indigo-500 transform hover:scale-105
    focus:scale-100 transition duration-300 ease-in-out"
  />
</div>
<div className="mb-4">
  <label for="feedback" className="block text-sm font-medium text-gray-700 text-left">
    Feedback:
  </label>
  <textarea name="textare" id="address" className="mt-1 p-2 block w-full rounded-md border outline-none border-gray-300 focus:border-indigo-500 focus:ring-1 focus:ring-indigo-500 transform hover:scale-105 focus:scale-100 transition duration-300 ease-in-out"></textarea>
</div>
<button
  type="submit"
  className="w-full py-3 px-4 text-white font-semibold bg-indigo-500 rounded-md
  focus:outline-none focus:bg-indigo-600 hover:bg-indigo-600 transform hover:scale-105
  active:scale-95 transition duration-300 ease-in-out"
>
  Submit </button>      </fieldset>      </form> </body>
```

## Project 2:

### Step 1:

Build a navigation bar:

```
<nav className="fixed left-0 top-0 z-20 w-full border-b border-gray-200 bg-white dark:border-gray-600 dark:bg-gray-900">
  <div className="mx-auto flex max-w-screen-xl flex-wrap items-center justify-between p-4">

    <a href="#" className="flex items-center">
      
      <span className="self-center whitespace nowrap text-2xl font-semibold dark:text-white">Evento</span>
    </a>
    <div className="flex md:order-2">
      <a href="#register"><button type="button" class="mr-0 rounded-lg bg-indigo-700 px-4 py-2 text-center text-sm font-medium text-white hover:bg-indigo-800 focus:outline-none focus:ring-4 focus:ring-indigo-300 dark:bg-indigo-600 dark:hover:bg-indigo-700 dark:focus:ring-indigo-800 md:mr-0">Register Now</button>
    </a>
    </div>
    <div className="hidden w-full items-center justify-between md:order-1 md:flex md:w-auto" id="navbar-sticky">
      </div>
      <ul className="mt-4 flex flex-col rounded-lg border border-gray-100 bg-gray-50 p-4 font-medium dark:border-gray-700 dark:bg-gray-800 md:mt-0 md:flex-row md:space-x-8 md:border-0 md:bg-white md:p-0 md:dark:bg-gray-900">
        <li>
          <a href="#" className="block rounded bg-indigo-700 py-2 pl-3 pr-4 text-white md:bg-transparent md:p-0 md:text-indigo-700 md:dark:text-indigo-500" aria-current="page">Home</a>
        </li>
        <li>
          <a href="#agenda" className="block rounded py-2 pl-3 pr-4 text-gray-900 hover:bg-gray-100 dark:border-gray-700 dark:text-white dark:hover:bg-gray-700 dark:hover:text-white md:p-0 md:hover:bg-transparent md:hover:text-indigo-700 md:dark:hover:bg-transparent md:dark:hover:text-indigo-500">Agenda</a>
        </li>
        <li>
          <a href="#host" className="block rounded py-2 pl-3 pr-4 text-gray-900 hover:bg-gray-100 dark:border-gray-700 dark:text-white dark:hover:bg-gray-700 dark:hover:text-white md:p-0 md:hover:bg-transparent md:hover:text-indigo-700 md:dark:hover:bg-transparent md:dark:hover:text-indigo-500">Host</a>
        </li>
        <li>
          <a href="#review" className="block rounded py-2 pl-3 pr-4 text-gray-900 hover:bg-gray-100 dark:border-gray-700 dark:text-white dark:hover:bg-gray-700 dark:hover:text-white md:p-0
      </ul>
    </div>
  </div>
</nav>
```

```

    md:hover:bg-transparent md:hover:text-indigo-700 md:dark:hover:bg-transparent
    md:dark:hover:text-indigo-500">Review</a>
  </li>
<li>
  <a href="#benefits" className="block rounded py-2 pl-3 pr-4 text-gray-900 hover:bg-
gray-100 dark:border-gray-700 dark:text-white dark:hover:bg-gray-700 dark:hover:text-white
md:p-0 md:hover:bg-transparent md:hover:text-indigo-700 md:dark:hover:bg-transparent
md:dark:hover:text-indigo-500">Benefits</a>
</li>
</ul>
</div>
</nav>

```

**Explanation:**

```
<nav className="fixed left-0 top-0 z-20 w-full border-b border-gray-200 bg-white
dark:border-gray-600 dark:bg-gray-900">
```

This `<nav>` element represents a **fixed top navigation bar** with the following properties:

1. **Positioning:**
  - o **fixed:** The navbar stays fixed at the top of the viewport.
  - o **left-0 top-0:** Ensures it is anchored to the top-left corner.
2. **Z-index:**
  - o **z-20:** Ensures the navbar is layered above most other elements.
3. **Size & Borders:**
  - o **w-full:** Makes the navbar span the full width of the viewport.
  - o **border-b border-gray-200:** Adds a bottom border in light gray (border-gray-200).
  - o **dark:border-gray-600:** In dark mode, the border color is darker (border-gray-600).
4. **Background Colors:**
  - o **bg-white:** Default background color is white.
  - o **dark:bg-gray-900:** In dark mode, it changes to dark gray (gray-900).

```
<div className="mx-auto flex max-w-screen-xl flex-wrap items-center justify-between p-
4">

</div>
```

This line creates a container for the NavBar content with flexbox properties for responsive layout and spacing.

**mx-auto:** This centers the element horizontally by setting the left and right margins to auto.

**flex:** Applies Flexbox layout to the element.

**max-w-screen-xl:** Sets the maximum width of the element to the screen-xl size (which is typically a large screen size in Tailwind CSS).

**flex-wrap:** Allows the child elements to wrap onto the next line if necessary.

**items-center:** Vertically aligns the child elements to the center of the container.

**justify-between:** Distributes the child elements with space between them, aligning them to the start and end of the container.

**p-4:** Adds padding of 1rem (16px) to all sides of the element.

```

<a href="#" className="flex items-center">
  
  <span className="self-center whitespace nowrap text-2xl font-semibold dark:text-white">Evento</span>
</a>

```

This code represents a hyperlink () with a flexbox layout, containing an image () positioned to the left with a margin (mr-3) and a text () "Evento" aligned to the centre vertically, with specific font size, font weight, and white colour with dark mode.

**mr-3:** Adds a right margin of 0.75rem (12px), creating spacing between this image and adjacent elements.

**h-12:** Sets the height of the image to 3rem (48px).

**self-center** → Aligns the element to the center of its parent (useful in a flex container).

**whitespace nowrap** → Prevents text from wrapping onto a new line.

**text-2xl** → Sets the font size to 1.5rem (24px).

**font-semibold** → Applies a semi-bold font weight.

**dark:text-white** → Changes the text color to white in dark mode (useful when Tailwind's dark mode feature is enabled).

```

<div className="flex md:order-2">
  <a href="#register"><button type="button" class="mr-0 rounded-lg bg-indigo-700 px-4
py-2 text-center text-sm font-medium text-white hover:bg-indigo-800 focus:outline-none
focus:ring-4 focus:ring-indigo-300 dark:bg-indigo-600 dark:hover:bg-indigo-700
dark:focus:ring-indigo-800 md:mr-0">Register Now</button>
  </a>
</div>

```

This code creates a flex container (

) with flexbox properties for responsive design (md:order-2). Inside the container, there is a hyperlink () with a "Register Now" button () styled with specific background colour, padding, text properties, and hover effects for both light and dark themes.

**flex** → Applies Flexbox to the element, making it a flex container. This allows child elements to be aligned and positioned using flex properties.

**md:order-2** → This is a responsive utility class that affects the order of the element inside a flex container on md (medium) screens and larger.

It moves the element to the second position (order-2) when the screen width is at least 768px (md breakpoint).

Before md, the default order applies (usually order-0).

**mr-0** → No right margin.

**rounded-lg** → Large border radius for rounded corners.

**bg-indigo-700** → Background color (indigo shade).

**px-4 py-2** → Padding (horizontal: 4, vertical: 2).

**text-center** → Centers text.

**text-sm font-medium** → Small text size with medium font weight.

**text-white** → White text color.

**hover:bg-indigo-800** → Darker indigo on hover.

**focus:outline-none** → Removes default focus outline.

**focus:ring-4 focus:ring-indigo-300** → Adds a focus ring with a soft indigo highlight.

**dark:bg-indigo-600 dark:hover:bg-indigo-700 dark:focus:ring-indigo-800** → Dark mode styles.

```
<a href="#agenda" className="block rounded py-2 pl-3 pr-4 text-gray-900 hover:bg-gray-100 dark:border-gray-700 dark:text-white dark:hover:bg-gray-700 dark:hover:text-white md:p-0 md:hover:bg-transparent md:hover:text-indigo-700 md:dark:hover:bg-transparent md:dark:hover:text-indigo-500">
```

**block** → Makes the anchor behave like a block element.

rounded → Adds rounded corners.

py-2 pl-3 pr-4 → Adds padding:

py-2 → Vertical padding (top & bottom).

pl-3 → Left padding.

pr-4 → Right padding.

text-gray-900 → Sets text color to dark gray.

hover:bg-gray-100 → Changes background color to light gray on hover.

dark:border-gray-700 → Applies a gray border in dark mode.

dark:text-white → Sets text color to white in dark mode.

dark:hover:bg-gray-700 dark:hover:text-white → Dark mode styles:

Changes background to dark gray on hover.

Keeps text white on hover.

md:p-0 → Removes padding on medium screens (md breakpoint and above).

md:hover:bg-transparent → Ensures no background change on hover in medium screens.

md:hover:text-indigo-700 → Changes text color to indigo when hovered in medium screens.

md:dark:hover:bg-transparent md:dark:hover:text-indigo-500 →

In dark mode, prevents background change on medium screens.

Changes text to a softer indigo shade when hovered.

## **Step 2:**

```
<section className="bg-gray-700 bg-[url(/img2.jpg)] bg-center bg-no-repeat bg-blend-multiply mt-6 h-screen bg-contain">
  <div class="mx-auto max-w-screen-xl px-4 py-24 text-center lg:py-56">
    <h1 class="mb-4 text-4xl font-extrabold leading-none tracking-tight text-white md:text-5xl lg:text-6xl">Unleashing the Power of Web Development</h1>
    <p class="mb-8 text-lg font-normal text-gray-300 sm:px-16 lg:px-48 lg:text-xl">Join us for an exciting journey into the world of web development, where we believe in harnessing the boundless potential of innovation, technology, and capital.</p>
    <div class="flex flex-col space-y-4 sm:flex-row sm:justify-center sm:space-x-4 sm:space-y-0">
      <a href="#register" class="inline-flex items-center justify-center rounded-lg bg-indigo-700 px-5 py-3 text-center text-base font-medium text-white hover:bg-indigo-800 focus:ring-4 focus:ring-indigo-300 dark:focus:ring-indigo-900">
        Book Your Spot Now
        <svg aria-hidden="true" class="-mr-1 ml-2 h-4 w-4" fill="currentColor" viewBox="0 0 20 20" xmlns="http://www.w3.org/2000/svg"><path fill-rule="evenodd" d="M10.293 3.293a1 1 0 11.414 0l6 6a1 1 0 01-1.414-1.414L14.586 11H3a1 1 0 110-2h11.586l-4.293-4.293a1 1 0 010-1.414z" clip-rule="evenodd"></path></svg>
      </a>
      <a href="#agenda" class="inline-flex items-center justify-center rounded-lg border border-white px-5 py-3 text-center text-base font-medium text-white hover:bg-gray-100 hover:text-gray-900 focus:ring-4 focus:ring-gray-400"> Learn more </a>
    </div>
  </div>
</section>
```

```
</div>
</div>
</section>
```

bg-gray-700 → Sets the background color to a dark gray (#374151).  
bg-[url(/img2.jpg)] → Sets a background image from /img2.jpg.  
bg-center → Centers the background image.  
bg-no-repeat → Ensures the background image does not repeat.  
bg-blend-multiply → Blends the background image with the background color using the multiply blend mode.  
mt-6 → Adds a top margin of 1.5rem (24px).  
h-screen → Sets the height to the full viewport height.  
bg-contain → Ensures the background image is fully contained within the element without cropping.

mx-auto → Centers the div horizontally.  
max-w-screen-xl → Limits the maximum width to screen-xl (1280px), ensuring it doesn't stretch beyond this size.  
px-4 → Adds horizontal padding of 1rem (16px) on both sides.  
py-24 → Adds vertical padding of 6rem (96px) on top and bottom.  
text-center → Centers all text inside the div.  
lg:py-56 → In large screens (lg), increases the vertical padding to 14rem (224px).

```
<svg aria-hidden="true" class="-mr-1 ml-2 h-4 w-4" fill="currentColor" viewBox="0 0 20 20"
xmlns="http://www.w3.org/2000/svg">
```

aria-hidden="true" → Hides the icon from screen readers (since it is decorative and not meant for accessibility).  
class="-mr-1 ml-2 h-4 w-4" → Tailwind CSS styles:  
-mr-1 → Small negative right margin (shifts left slightly).  
ml-2 → Adds left margin (0.5rem or 8px).  
h-4 w-4 → Sets the height and width to 1rem (16px).  
fill="currentColor" → Inherits text color, making it adapt to different themes.  
viewBox="0 0 20 20" → Defines the coordinate system for scaling.  
xmlns="http://www.w3.org/2000/svg" → Defines the SVG namespace (required for proper rendering).  
<path> → Defines the actual shape of the arrow.

## **COMPLETE CODE**

```
import './App.css'

function App() {

  return (
    <>

      <nav className="fixed left-0 top-0 z-20 w-full border-b border-gray-200 bg-white dark:border-gray-600 dark:bg-gray-900">
        <div className="mx-auto flex max-w-screen-xl flex-wrap items-center justify-between p-4">

          <a href="#" className="flex items-center">
            
            <span className="self-center whitespace nowrap text-2xl font-semibold dark:text-white">Evento</span>
          </a>
          <div className="flex md:order-2">
            <a href="#register"><button type="button" class="mr-0 rounded-lg bg-indigo-700 px-4 py-2 text-center text-sm font-medium text-white hover:bg-indigo-800 focus:outline-none focus:ring-4 focus:ring-indigo-300 dark:bg-indigo-600 dark:hover:bg-indigo-700 dark:focus:ring-indigo-800 md:mr-0">Register Now</button>
